Empathy Map Canvas

An empathy map is a visual tool used to understand the users of a system, their behaviours, needs, goals, challenges, and expectations.

For the **Medical Diagnostic Center**, the primary users are patients who need an easy and convenient way to browse diagnostic tests, book appointments, make payments, track appointments, and access their laboratory reports.

The empathy map helps us understand the problems faced by patients during the traditional diagnostic testing process and design a digital solution using ServiceNow.

Target User: Patient

1. What does the user Think & Feel?

- Wants a simple and convenient way to book diagnostic tests.
- Feels frustrated by long waiting times and manual booking procedures.
- Wants to know the status of their appointment.
- Is concerned about payment confirmation.
- Wants laboratory reports to be available quickly and securely.
- Expects their personal and medical information to remain private.

---

2. What does the user See?

- Long queues at diagnostic centers.
- Manual appointment booking processes.
- Difficulty finding information about available diagnostic tests.
- Limited visibility into appointment status.

- Delays in receiving laboratory reports.
- Different systems or manual processes for booking, payment, and reports.

---

3. What does the user Say & Do?

- Searches for available diagnostic tests.
- Compares different tests and their details.
- Books a convenient appointment date and time.
- Provides personal information for the appointment.
- Makes payment for the selected diagnostic test.
- Checks appointment status regularly.
- Views and downloads laboratory reports after the test is completed.

---

4. What does the user Hear?

- Instructions from doctors regarding required diagnostic tests.
- Appointment confirmation messages.
- Updates from diagnostic center staff.
- Payment confirmation notifications.
- Notifications when laboratory reports are ready.

User Pains

The major challenges faced by patients include:

- Manual and time-consuming appointment booking.
- Difficulty in finding available diagnostic tests.
- Lack of visibility into appointment status.
- Delays in receiving test reports.
- Difficulty managing multiple appointments.
- Uncertainty about payment and booking confirmation.
- Lack of a centralized system for viewing diagnostic reports.

User Gains / Needs

The user expects:

- Easy access to diagnostic test information.
- A simple online appointment booking process.
- Convenient date and time-slot selection.
- Clear payment and booking confirmation.
- Real-time appointment status tracking.
- Secure access to laboratory reports.
- A single portal to manage appointments and reports.

Empathy Map Summary

Think & Feel	**See**
Wants convenient and fast diagnostic services	Manual processes and long waiting times
Wants secure access to medical information	Different systems for booking and reports
Wants to track appointments easily	Limited appointment status visibility

Say & Do	**Hear**
Searches for tests and books appointments	Instructions from doctors and diagnostic centers
Makes payments and checks booking status	Booking and payment confirmations
Views laboratory reports	Notifications when reports are ready

---

Problem Identified

Patients often face difficulties in managing the complete diagnostic testing journey. Traditional processes may involve separate or manual steps for selecting a test, booking an appointment, providing patient details, making payment, tracking the appointment, and receiving laboratory reports.

Therefore, there is a need for a **centralized Medical Diagnostic Center application** that provides an end-to-end digital experience.

Proposed Solution

The **Medical Diagnostic Center** is a ServiceNow-based application designed to manage the complete diagnostic testing process.

The system enables patients to:

1. Browse available diagnostic tests.
2. Select and book a test.
3. Enter patient details.
4. Choose an appointment date and time.
5. Complete the payment process.
6. Track appointment status.
7. Receive appointment confirmation.
8. View completed laboratory reports.

The application also supports backend automation, including appointment management and laboratory report generation when a test is completed.
