Project Name **Medical Diagnostic Center – ServiceNow**

Maximum Marks **2 Marks**

Proposed Solution

S.No.	Parameter	Description
1	**Problem Statement (Problem to be solved)**	Patients may face difficulties in finding diagnostic tests, booking appointments, selecting time slots, tracking appointment status, completing payments and accessing laboratory reports. Manual or disconnected processes can make the overall diagnostic journey inconvenient and time-consuming.
2	**Idea / Solution Description**	Develop a **ServiceNow-based Medical Diagnostic Center** that provides a centralized digital platform for browsing diagnostic tests, booking appointments, entering patient details, making payments, tracking appointment status and accessing laboratory reports through the Service Portal.
3	**Novelty / Uniqueness**	The solution combines the complete diagnostic journey into a single ServiceNow platform. It includes custom Service Portal widgets, appointment management, automated status handling, notifications and automatic laboratory report generation when an appointment is completed.
4	**Social Impact / Customer Satisfaction**	The solution provides patients with convenient access to diagnostic services, reduces dependency on manual processes and improves visibility of appointments and reports. A centralized portal can provide a more consistent and user-friendly experience for patients and diagnostic center staff.
5	**Business Model (Revenue Model)**	The diagnostic center can generate revenue through diagnostic test bookings and related laboratory services. Different tests can have different prices, with payment status maintained through the application.

6	**Scalability of the Solution**	The solution can be expanded by adding more diagnostic tests, patients, appointments, reports, staff roles and portal features. Additional modules such as advanced analytics, online payment gateway integration and external healthcare integrations can be added in future versions.
